R3fi.Finance - Lite paper

Cryptocurrency is booming again with vigor not seen since 2017. The current growth has brought optimism back and the emergence of a new class of crypto assets and companies. In spite of previous market hiccups, the actual technology continued to evolve with developers finding new and clever ways to solve problems spanning both physical and digital realms.

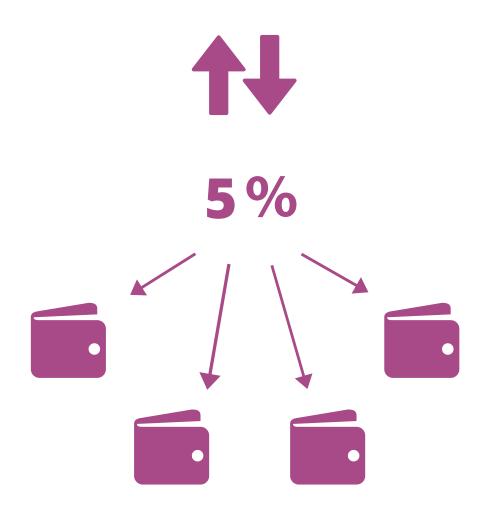

New cryptocurrency assets have begun to launch as products unto themselves with fully funded product development and PR campaigns. These tokens are marketed as holding different kinds of inherent value. Hopeful speculants and digital prospectors get excited by these new currencies and buy up these tokens in the hopes of quick returns.

What is a rarely spoken truth, however, is that few of these new contracts offer long term value. A company can have major success in both market penetration and adoption of their their technology without it being reflected in the value of their cryptocurrency — much to traders' disappointment. Seasoned traders know this and actively ignore them.

Another issue affecting the longevity and fairness of these new coins is the fact that large proportions of the total token supply is often held by the development team and their partners meaning the game is rigged before anyone else can buy in. To add insult to injury, most cryptomarkets are heavily manipulated by bot traders that do swing-trades in a matter of milliseconds. This alone will strip human traders of their returns; 97% of all traders who attempt to trade against bots lose money, killing. cryptocommunities.

Until now.

R3fi marks a change in how crypto trading is conducted. It is a community funded and community driven cryptocurrency where the token is the actual technology. The ethereum smart contract is an improved iteration of RFI. One of the several ways this R3FI improves on RFI is that it's designed to earn for the community. 5% of all trades, buys and sales, are distributed among holders serving as a passive form of income that incentivizes holding. In effect it serves as a bank for the community. This fee is distributed automatically, and users can watch their wallet grow without having to stake or claim.

The 5% fee also works as a mechanism that render bot trading futile. Bots are still trading but for every swing trade the bot wallet lose 10% that is distributed back to the community.

In short, the token provides value to its community. To make sure that the community would be the winners, the presale was at a 10 ETH hardcap, <u>liquidity was locked</u>, developers renounced ownership upon launch, and no developer or partner wallets were generated. Thanks to its engaged and ever-growing community, R3FI has had an amazing start to its very short life. Inevitably, other crypto projects will follow in the footsteps of R3FI.

This is the future.

Trading R3FI is currently done on <u>Uniswap</u> and prices can be monitored on <u>Dextools</u>.

2021 Roadmap Version 1.0

- Contract developed and liquidity locked
- Uniswap listing
- Twitter launch
- Reddit Launch
- Coin market cap listing
- Coinopsy listing
- Community leadership team established
- Leadership Transparency Channel Created
- Roadmap
- Lite paper
- R3Fi Token redistribution calculator deployed
- Establish Facebook, Instagram and Tiktok Presence
- R3Fi Reborn Giveaway
- R3fi Branding Deck Built
- Goal Coingecko listing
- Goal Feb AMA
- Goal marketing team development
- Goal Marketing Strategy
- Goal Whitepaper
- Goal Revised 2021 Roadmap
- Goal 2nd Exchange Listing
- Goal AMA -post 2nd exchange listing
- Goal 2nd R3fi giveaway and Twitter Promo
- Goal Charitable giving Harambe Memorial Event to benefit Apes from community
- Goal R3fi Tiktok Event
- Goal 3rd Exchange listing
- Goal 2022 Roadmap planning
- Goal Defi Applications staking and lending use case development
- Goal 4th Exchange Listing
- Goal 2022 Roadmap Release
